

User Flow:

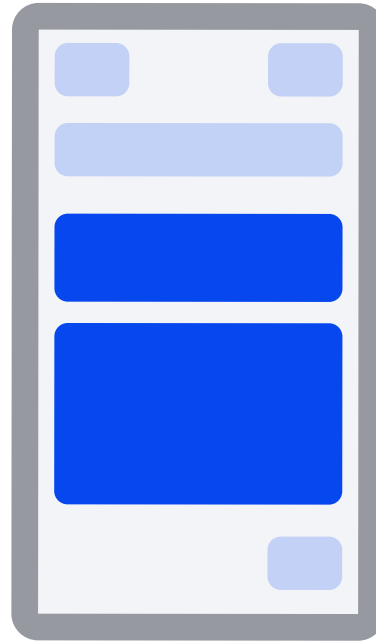

# Calculate an Equation

Step 1:

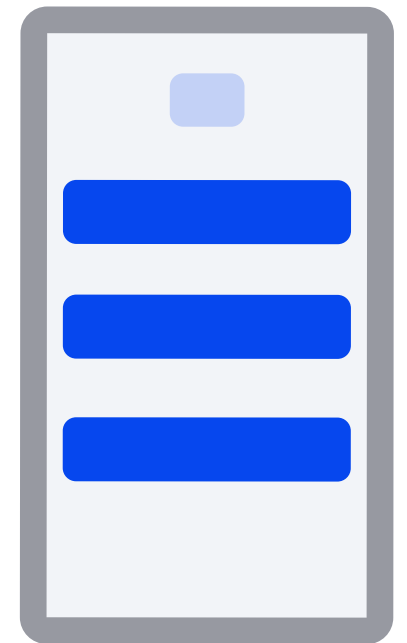

User arrives at our welcome screen and is provided with a list of buttons to select an option.

Each option will take them to a new page to complete their goal.

Step 2:

When the user selects the “Calculator” button they will be redirected to another page that provides them with the basic calculator.

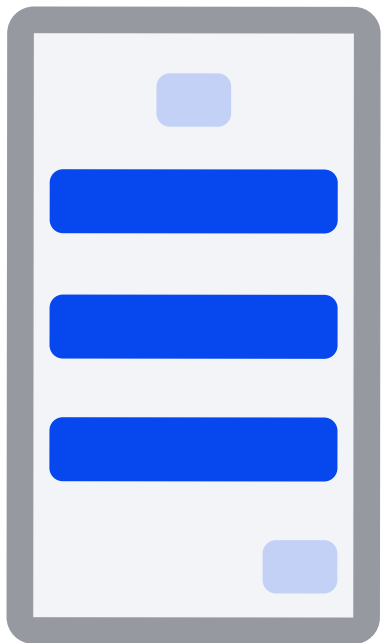

Step 3:

When the user has accomplished their goal, they can open the hamburger button to select another page.

User Flow:

# Calculate a Tip Amount Based on the Bill Amount

Step 1:

User arrives at our welcome screen and is provided with a list of buttons to select an option.

Each option will take them to a new page to complete their goal.

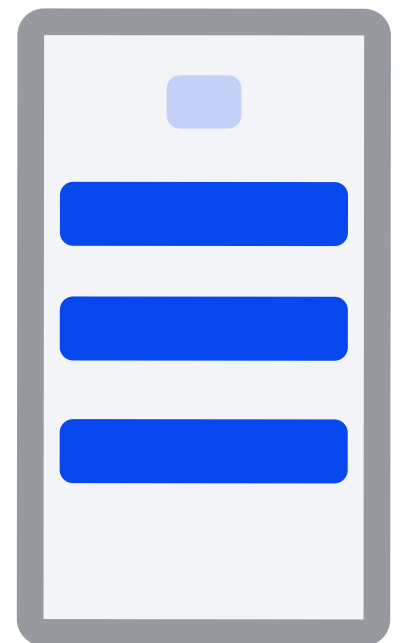

Step 2:

When the user selects the “Tip Calculator” button they will be redirected to another page that provides them with the input fields to plug in the bill amount and the percentage they desire to tip.

The tip amount in dollars will appear along with the total bill with tip included.

At the bottom of the page, a list will generate and display past bill amounts with the tip included.

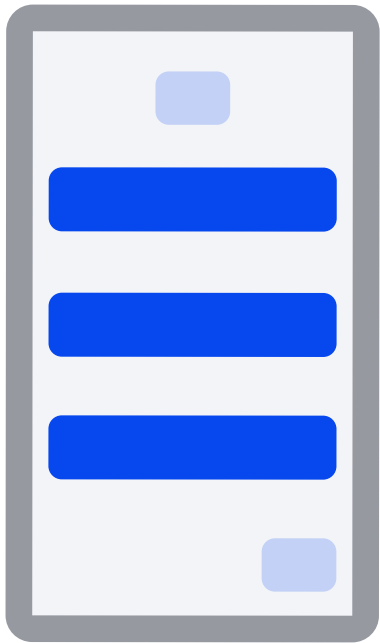

Step 3:

When the user has accomplished their goal, they can open the hamburger button to select another page.

User Flow:

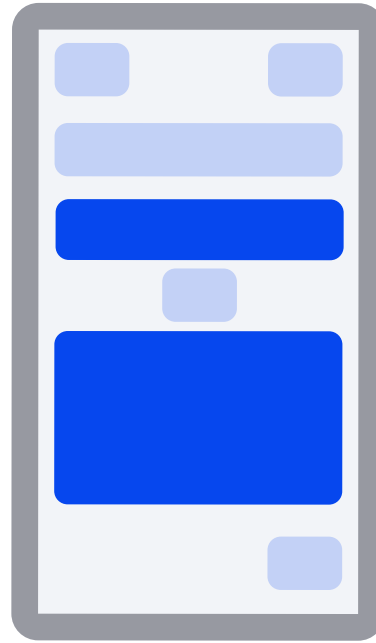

# Receive Suggested Tip Amounts Based on the Bill Amount
